ABSTRACTED-PUB-NO: JP 10149404A

BASIC-ABSTRACT: The apparatus (100) is connected to data management unit through a network. A process unit (160) which performs output control, data communication through the network and control of other units. An assembly unit converts the data to be transmitted through the network into a transmitting format while a data taking-in unit receives the data through the network.

An input processing unit processes the data received through the input unit. A fixed asset management processor is provided for performing fixed asset

management process. The data is edited and output by an output unit.

USE - Is used in financial institution for accounts management.

ADVANTAGE - Enables use of single database for multiple apparatus. Enables transfer of data via network.
